

**METHODS AND APPARATUS FOR VISUALLY CREATING COMPLEX
EXPRESSIONS THAT INFORM A RULES-BASED SYSTEM OF CLINICAL
DECISION SUPPORT**

Abstract

5 A method of constructing a Boolean expression in a clinical setting, including
identifying at least a first and a second data assertion to add to the Boolean
expression, adding at least one Boolean logical operator to the Boolean expression,
determining an order of evaluation for the first and second data assertions, and
visually depicting the first and second data assertions and the Boolean logical operator
10 in a hierarchal display.
